### HUAIRASINCHI IMPTEK

20 ediciones

2023

We are a few months away from Huairasinchi Imptek 2023 and this time it will be special. "El Huaira" celebrates 20 editions of exploring the deep Ecuador. You're going to love this anniversary route.

This Huairasinchi will have some lowlands sections, and also it will go up, but not be in the high mountains. We will have a great diversity of climates and altitude, but it will not exceed 3200 meters above sea level. A route like this means there will be uphill and downhill sections, but don't expect too many flats.

#### Race Details

<b>RACE VENUE</b>	To be revealed in July 2022
<b>OFFICIAL LANGUAGE OF THE RACE</b>	Spanish – (translation to English)

#### ***Climate and average temperature in July–August in the sector of the competition.***

- Minimum of 10 C y max. of 27 C
- 60% - 70% humidity
- Rain probability moderate - high

### Paddle sections:

The paddling stages for both the Expedition and Adventure categories will be very fun and in rivers with current, with some sections of classes II+ and III; It will depend a lot on the rain in July.

The Expedition category will have more than one paddling stage with approximately 15% of the race in the water. The Adventure category will have a KAYAK paddling stage with 8% of the race in the water. For this reason, we suggest all teams strengthen and practice their skills in this discipline a lot. All competitors must have the skills to safely handle and control their boats in both flat water, rip currents, crosswinds and class 2 and 3 white waters.

**Safety in the water is essential and all competitors who race Huairasinchi must have this knowledge.**

### Weather:

The climate in this edition will be very subject to the climatic events of the region. It is very possible that there will be plenty of rain during the race. This year racers must be prepared to be in changeable and humid weather. It is important to pay close attention to correct hydration, foot and skin care in this type of climate.

### Packrafts:

Like last year, Expedition category teams are required to have DOUBLE Packrafts for the paddle stages as part of their mandatory personal equipment.

It is important that all the teams are familiar with these boats. Take into account that you will have to carry them in your backpacks with your paddles and life jackets. It is also of the utmost importance that you have a repair kit and that all teams know how to make basic repairs on the ground in case of damage or cuts to the boat.

If you still don't have your boat, it's important to buy it early. It will be a requirement for the Non Stop expedition race and also for the 2024 Adventure World Championship in Ecuador. It is important that you train with the boat several times before the competition.
